To

The Firms dealing in G. I. Pipes.

Enquiry No. 3739.

G. I. PIPES, FITTINGS, ETC.

DEAR SIR/GENTLEMEN,

Please be good enough to intimate your best prices and the earliest time of delivery for the materials described in the attached schedule, in the form printed below.

It should be distinctly understood that the acceptance by us of your quotation will be subject to the following conditions :—

Withdrawal from the quotation after it is accepted or failure to make the supply within the specified time or according to specifications will entail cancellations of the order and purchases being made at your expense from other sources in addition to the levy of a penalty of 3 per cent of the value of the order as and by way of liquidated damages. In such an event, the Stores Purchase Committee reserve the right to remove your name from the list of approved firms.

The quotations should be superscribed "Quotations for G. I. Pipes, fittings, etc.," with the above enquiry Number.

This enquiry will be closed on the 15th November 1939.

No. S. P. C. 12957-63, dated 28th October 1939.

To

The Firms dealing in Street Light Fittings.

Enquiry No. 3740.

SERIES STREET LIGHT FITTINGS.

GENTLEMEN,

I write to request you to quote your best prices and earliest time of delivery for the fittings described below and conforming to the following specifications :—

475 Sets of Series Street Light Fittings consisting of the following :—

(*a*) Cast iron hood,
(*b*) Insulator body,
(*c*) Series Socket,
(*d*) Receptacle and
(*e*) 20″ radial wave reflector.

Itemized prices for the several parts of the fittings should be given in the tender.

Catalogues or sketches illustrating the fittings offered should be furnished without which no tender will be considered.

The prices to be quoted should be for delivery f.o.b. Foreign Port and C.I.F. Madras.

This enquiry will close on the 20th December 1939.

SPECIFICATION FOR LUMINAIRES FOR SERIES CIRCUITS OPERATING ON A CONSTANT CURRENT OF 5·5 AMPERS.

The luminaires covered by this specification shall be suitable for installation in residential areas, business streets and outlying districts, where the lighting is by series system on a constant current of 5·5 ampers. These luminaires shall be simple in design and sha l have the important feature of all parts being interchangeable. They shall be such that the changes in lamps are readily accomplished to meet all requirements that may develop from time to time

The luminaires shall primarily consist of a cast iron hood, wet-process porcelain insulator, series socket, fire enamelled, radial wave reflector with reflector holder, etc. The main insulator shall be made of wet-process porcelain and shall be finished with coloured glaze, providing high mechanical and dielectric strength and shall be equipped with non-ferrous contact parts and supporting elements.

The luminaires shall be such that a flexible and serviceable arrangement is provided for supporting either sheet metal or cast iron reflectors with glass-ware to the insulator without the use of adoptors. The method of fixing shall be such that the clamping arrangement shall not only form a firm support to the reflector, but also act as a protector for the insulator, thus eliminating the possible radial stress on the insulator. The luminaires shall be provided with suitable sheet metal reflectors made of high grade, enamelled steel and finished in white vitreous fire enamel on the reflecting surface and a dark coloured vitreous enamel fire on the outside surface. The reflector shall be designed such that the contour increases its strength and prevents flexing of the metal and consequent chipping of the enamel.

The main insulator shall be of sufficient size to utilise either 5⅜" or 7" light centre lamps in reflector position. The luminaire, when tested in accordance with the B.E.S.A. or A.I.E.E. wet test requirements shall show a start of static leakage above 14 K.V. and flash-over above 28 K.V.

The series socket shall be designed with the contacts shell and prongs, with interchangeable porcelain or composition shells. The design must be such that the shell is capable of being easily removed for replacements. The prongs shall be constructed from a single piece of metal from the clips holding the film cut out direct to the lamps' base, so as to reduce the contact resistance. All metal parts shall be of bronze or copper nickle-plated on an equivalent good quality material. The sockets shall be designed for a continuous operation on a 10 ampere circuit.

The series receptacles shall be provided with contact springs so arranged that the series circuit is not interrupted on removal or insertion of the socket. One set of springs shall always be in contact with the socket prongs or be short-circuited.

The adopters shall be for operating on a medium screw base lamp from a mogul socket. A mogul socket extension of 2½" shall be available for operating 7" light centre lamps in luminaires designed for 9½" light centre lamps.

The film cut outs to be used in conjunction with these series luminaires shall be designed to meet the requirements for use on series street lighting systems, with lamps ranging from 60 C.P. to 250 C.P. These film cut outs shall be available in special ranges with varying break-down voltage limits in order to meet all of the applications. The film cut outs shall be of either copper oxide disk or the magazine film type.

Full details of the various components, with all the constructional features of the entire luminaire with illustrative literature must be submitted along with the tender.

No. S. P. C. 12928-51, *dated 28th October* 1939.
